

Exporting Files for GCS900 in Trimble Business Center

- 1) Insert a USB stick into your computer
- 2) Open “Trimble Business Center”

- 3) Once open click on File and then New File (Make sure its set to US Survey Feet)
- 4) Drag your line work (.dxf), surface file (.ttm) and calibration file from the rover (.dc) into the graphed area. Your line work and surface should be visible.
- 5) Click the export button in the Project tab, Data group. Be sure the click the top half of the icon.

- 6) Follow the steps on the next page.

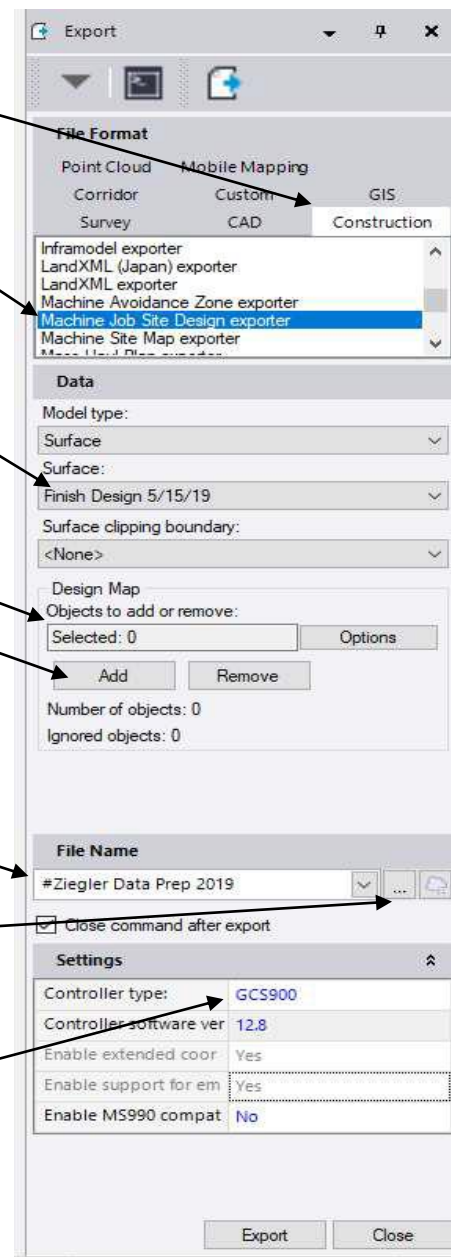

In the Construction Tab, select Machine Job Site Exporter

Select the surface you wish to include in your design. Note that you chose the correct surface you want Cut/Fills calculated to.

Click in the Selected: box. You will see your cursor flashing. You can then click on our drag a box around the line work you wish to see on your machine. Once line work is selected tap Add.

Under File Name, you are able to name the file and dictate where it saves to. To dictate where it is saved to click the ... to the right. Save to USB ->Machine Control Data ->All -> Create a new folder Site Name (In here)

Under the Settings box, chose GCS900, your controller software, and leave the other two options defaulted.

- 7) It's always good to double check the files on your USB to make sure you created 4 files
- a. .svl – machine line work
 - b. .svd – machine surface
 - c. .cfg – machine calibration
 - d. .cal -calibration
